**Common
framework
for machine-
readable data
sharing**

**Internet of
Things (IoT)**

Web 3.0

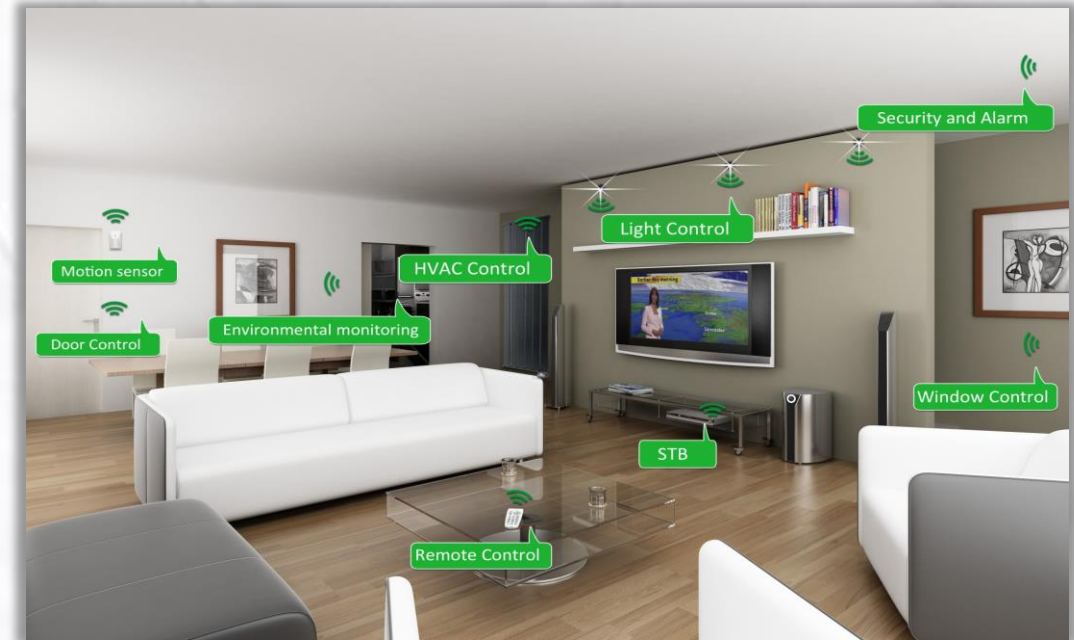

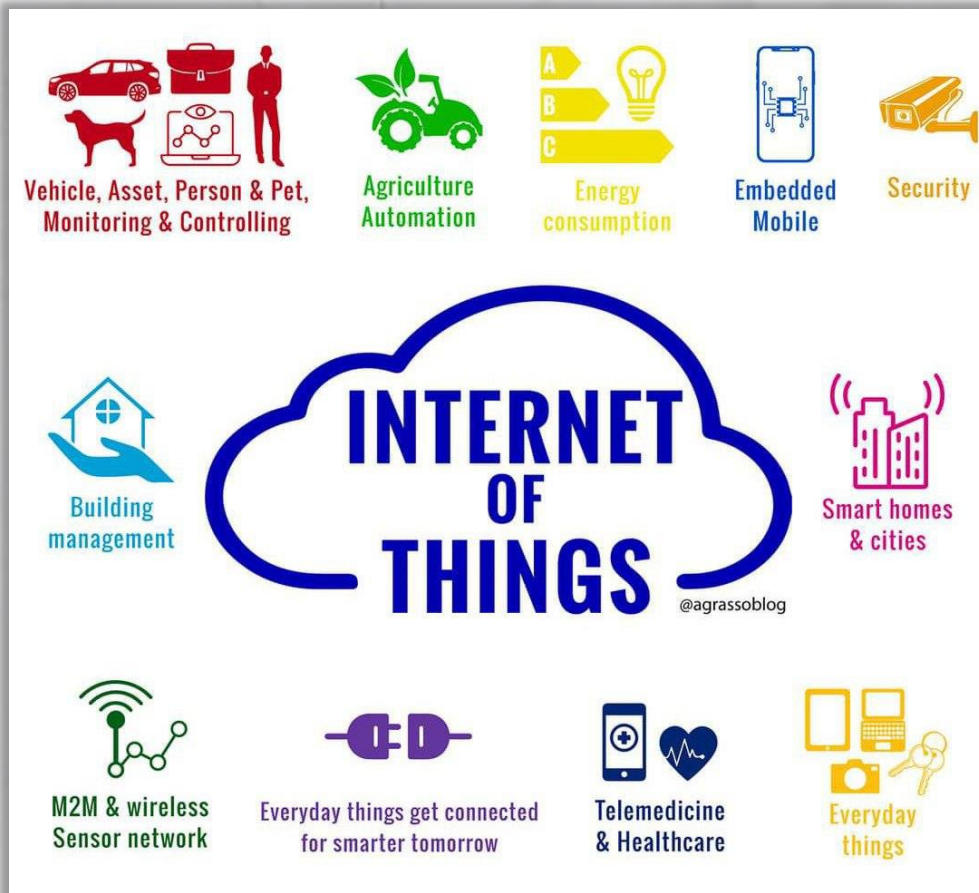

I have a dream for the Web [in which computers] become capable of analyzing all the data on the Web – the content, links, and transactions between people and computers. A "Semantic Web", which makes this possible, has yet to emerge, but when it does, the day-to-day mechanisms of trade, bureaucracy and our daily lives will be handled by machines talking to machines. The "intelligent agents" people have touted for ages will finally materialize.

Sir Tim Berners-Lee (1999)

'Hologram' lecturers to teach students at Imperial College London

By Leo Kelion
Technology desk editor

1 November 2018

f t e Share

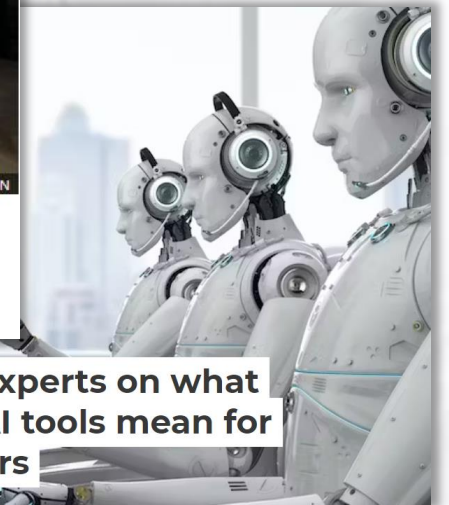

University classes are set to be given a futuristic spin by letting lecturers appear as hologram-like apparitions beamed in from afar.

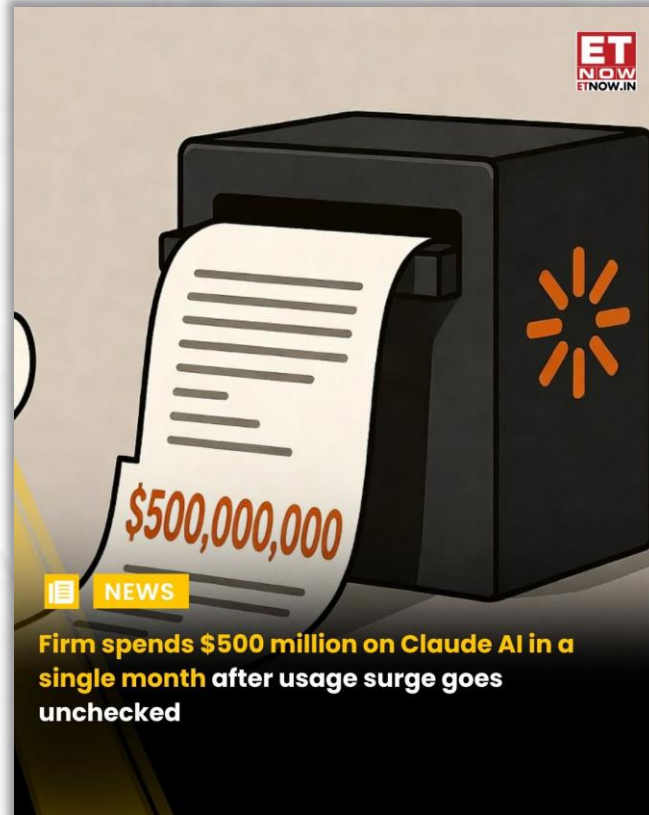

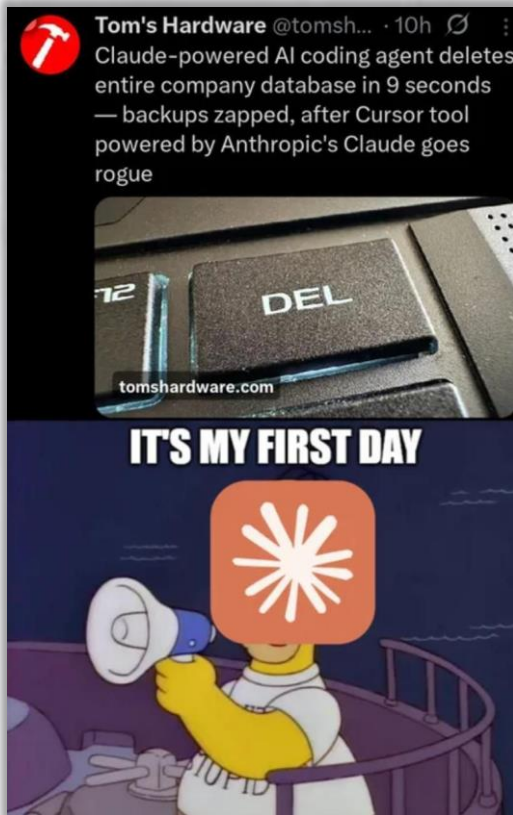

Imperial College London will show off the technology at a special event later on Thursday before deploying it more widely.

Summary

The Web facilitates a new cyclic development of emerging technologies, based on micro and macro environments

Web 3.0 and Semantic Web allows computers to understand data and is the backbone of the Internet of Things

Web 2.0 trends and issues have various pros and cons
